Jabalpur, India

Projects

Interactive Web Portfolio, Client Projects

- Developed custom, interactive HTML portfolio websites for customers based on their specific branding, content, and business requirements.
- Designed responsive and visually engaging web pages to showcase client portfolios, multimedia content, services, and digital experiences.
- Integrated front-end development with modern UI/UX and digital marketing principles to create professional and engaging online experiences.
- Managed the end-to-end development of client portfolio pages, from design and content presentation to implementation and final delivery.
- Delivered tailored web solutions that helped customers establish a professional online presence and effectively showcase their work.

Operational & Sales Visualization

- Developed interactive dashboards to transform raw Excel and SQL data into clear, actionable business visualizations.
- Cleaned, organized, and analyzed datasets to identify revenue trends, sales performance, customer segments, and operational insights.
- Created dynamic charts, KPIs, and visual reports to make complex business data easier to understand and interpret.
- Built visualizations for operational and sales-related use cases, including supply chain tracking, revenue analysis, and customer segmentation.
- Delivered user-friendly dashboards that enabled customers and stakeholders to monitor performance and make data-driven business decisions.

Analytics Dashboard, *Power BI*

- Developed a Power BI analytics dashboard to analyse and monitor viewer engagement, audience retention, watch time, and subscriber growth for the Pitambara Physio Care & Rehab's Instagram.
- Created interactive charts, KPI cards, trend visualizations, and performance reports to identify patterns in audience behavior and content performance.
- Analyzed engagement and retention trends to understand which content performed best and where audience drop-offs occurred.
- Used the dashboard insights to support content strategy decisions, helping identify opportunities to improve audience engagement, retention, and subscriber growth.

Design And Development of Low Cost Vacuum Chamber

Developed a low-cost vacuum chamber to create controlled environments by removing air and other gases. Designed the system for essential experiments and processes in fields such as material science, electronics, aerospace, and chemical engineering.

Certifications

Artificial Intelligent Job Simulation (Cognizant Forage)

Covered Machine Learning, Model Building and Interpretation, Quality Assurance, and Data Modeling.

Elements of CAD

Solidworks

Digital Marketing (MSME)
